

Project Plan

We are going to break the project down into 4 phases. The first phase is planning. We will identify modules in the project and then will break each module down into tickets. This approach allows each of us to work on different parts of the project so we all understand it better. Phase 2 is mostly the design phase and it will involve building the project skeleton and laying out the project foundation. Phase 3 is implementation, this is where we actually write the methods and do testing. Phase 4 involves making documentation for the project and writing the report. Furthermore, we set phase dates and discussed doing a set number of tickets before each phase so we keep pace.
